

OPTIMAllog

Trusted Productivity Metrics

PROJECT SCOPE AND DOCUMENTATION

OPTIMAlog is an ultra-simple daily work-logging or ticketing Software as a Service (SaaS) platform that turns ordinary employees into high-performers. Staff get to “log” what they actually did, supervisors see real-time dashboards, and management finally gets accurate, searchable proof of daily productivity – all on a secure, ticketing system. No complex training, no expensive hardware, no foreign software – just instant accountability and competence tracking

Core Purpose

A centralized platform to monitor employee activities, project statuses, and productivity metrics in real-time and to help organizations eliminate “I was busy” excuses and replace them with visible, searchable proof of daily output. This serves to be a fast, reliable and smart way of tracking workers' tasks, and better way of proving the competence of each team member.

The Overarching Problem

Many organizations today really want to state out the fact that their employees are actually working. But the following are some of the challenges that organizations and companies face:

- ❖ Supervisors have no reliable way of knowing what each team member actually did each day.
- ❖ Auditors and the HR keep asking for “evidence of daily activity” – and there may be nothing real to show.
- ❖ Monthly reports are copy-pasted or invented at 16:55 (in the last minute).
- ❖ Remote/field staff productivity is a black box. Well, some report is brought back, but at what particular time was each task handled?
- ❖ Annual performance reviews are sometimes based on feelings, not facts.
- ❖ Your best performers are frustrated because the lazy ones hide in the noise.

How OPTIMAllog Fixes It

The *OPTIMAllog* System, as a solution, comes in to play with the following fixes:

- ✓ Employee opens the link/webapp and logs in → types one sentence of what has been done → clicks “Log It” → and it is done.
- ✓ Entry is instantly timestamped and stored forever.
- ✓ Supervisor opens live dashboard → sees exactly who did what, when, and how much. Where necessary, even see images as proof.
- ✓ Export any date range to Excel/PDF in one click.
- ✓ Everything is private, encrypted, and locally managed.

Key Features (SaaS Version)

<i>Feature</i>	<i>Benefit to the Company</i>
Short time daily logging	Simple, and Zero resistance – even drivers and field officers use it.
Real-time supervisor dashboard	Instant visibility – no more waiting for weekly reports.
Department & individual filters	See performance by team, branch, or person.
One-click Excel/PDF export	Perfect for audits, board reports, and payroll justification.
Role-based access	Employees see only their logs; managers see everything.
Custom branding	Your logo, your colours, your domain (e.g., log.optima.zm).
Unlimited users & logs (Extra feature)	Flat monthly fee (customized according to specific/featured number of users and logs).

Technical Facts (For IT Managers)

- 🚧 Built on PHP 8 + MySQL.
- 🚧 Zero external dependencies that can be blocked.
- 🚧 Can be installed on your own server.
- 🚧 Full nightly backups + 256-bit encryption at rest.
- 🚧 Hosted on personal and accounted cloud services.

Call-to-Action

This project tends to solve a problem experienced by many, as reported by many organizations, and this solution is ready to be launched to mitigate all such issues, and related. You will see real daily logs from day one.

“*OPTIMAl*og – Turning ‘I was busy’ into ‘Here’s exactly what I did today’ – Fast, reliable and smart way of tracking workers' tasks, and better way of proving the competence of each team member.”
